Syntax of F_i^+

Types
$$A,B,C ::= \top \mid \bot \mid \mathbb{Z} \mid X \mid A \rightarrow B \mid \forall X*A. \ B \mid \{\ell:A\} \mid A \& B$$
 Expressions
$$e ::= \{\} \mid n \mid x \mid \mathbf{fix} \ x \colon A. \ e \mid \lambda x \colon A. \ e \colon B \mid e_1 \ e_2 \mid \Lambda X*A. \ e \colon B \mid e \ A$$

$$\mid \{\ell = e\} \mid e \colon \ell \mid e_1, e_2 \mid e \colon A$$
 Type indices
$$T ::= \mathbb{Z} \mid \overrightarrow{T} \mid T^{\forall} \mid \{\ell:T\} \mid T_1 \& T_2$$
 JavaScript code
$$J ::= \varnothing \mid J_1; J_2 \mid \mathbf{code}$$
 Destinations
$$dst ::= \mathbf{nil} \mid y? \mid z$$

$\boxed{\Gamma; dst \vdash e \Leftrightarrow A \leadsto J \mid z}$

(Type-directed compilation)

$$\begin{array}{c} \text{J-App} \\ T = |\overrightarrow{B}| \\ \Gamma, x : A; y? \vdash e \Leftarrow B \leadsto J \mid y_0 \\ \hline \Gamma; z \vdash \lambda x : A. \ e : B \Rightarrow A \rightarrow B \leadsto \operatorname{code} \mid z \\ \end{array}$$

                                                                                                 J1; J2;
```

Copying properties n.b. there seems to be some alternatives:

- Object.assign(dst, src) does not properly copy getters;
- Object.defineProperties(dst, Object.getOwnPropertyDescriptors(src)) is proper but slow;
- Object.setPrototypeOf(dst, src) does the prototype trick but is even slower.

```
function copy(dst, src) {
  for (const prop in src) {
    var getter = src.__lookupGetter__(prop);
    if (getter) dst.__defineGetter__(prop, getter);
    else dst[prop] = src[prop];
  }
}
```
